

Infinity Lube™ is a revolutionary lubricant that supplies superior protection which goes far beyond all other conventional lubricants. Infinity Lube™ proprietary formula actually conditions the metal itself, infusing the metal with carbon and making it harder and more able to reduce friction, corrosion and wear. This conditioning process starts at 98°F (37°C), extending the strength of the surface film by up to 10 times or even more.

Unlike the competition, Infinity Lubes are plant based and 100% toxin free. There are no coatings, fillers or other toxic paraffins, teflons etc. Most other lubricants' objectives are water displacement and film lubrication, which is oftentimes accomplished by utilizing environmentally unsafe chemistries. They attempt to reduce metal degradation, but the constant attacks by oxidation and acids on the metal surfaces means that more applications of the lubricant are required. Furthermore, "lubricating metals" like Molybdenum and Graphite, which act as coatings, are microscopic abrasives that wear down the very metal they are trying to protect while also creating drag in the machine itself causing it to consume more energy.

Infinity Lube™ works differently by internally treating the metals, resulting in a harder, smoother, and stronger surface. This effectively shields them from oxidation and corrosion, preventing wear, friction, and potential damage.

OVERALL ADVANTAGES

- Reduces wear & corrosion by over 90%
- Lowers amperage needed to operate equipment
- Reduces friction wear & operating temperature increasing sustainability
- Minimizes downtime from equipment breakdowns
- Reduces engine noise for a smoother quieter operation
- Eliminates the use of toxic or harmful chemicals in conventional lubes
- Reduce your lubrication costs
- Strengthens & smooths metals on a micron level
- Outstanding barrier performance against abrasive particles, such as dirt, sand, salt, & mud
- Increases life of bearings & longevity of lubricated equipment
- Go up to three times longer between oil changes with Liquid Friction Eliminator
- Extend your intervals between treatments

LINE OF PRODUCTS

Infinity Lube™ Super Grease

improves the sustainability of all equipment. Especially at extreme pressure, temperatures and speeds, as well as wet and dirty environments.

Infinity Lube™ Liquid Friction Eliminator (LFE)

protects bearing and gear surfaces. Liquid Friction Eliminator can also be used in gear boxes, as a machining oil for machine shops, and any industrial or home need.

Infinity Lube™ Super Spray

is suited for all external mechanical systems and metal surfaces that need a lubricant, cleaner, degreaser, cutting fluid, or surface protectant.
